

# EDIBLES: LATE SUMMER/EARLY FALL VEGETABLES

© Rainbow Gardens 2022

**Beans (snap, lima)**

**Chard (Swiss)**

**Corn**

**Cucumbers**

**Eggplant**

**Greens (Warm Season)**

**Peppers**

**Squash (Summer and Winter)**

**Tomatoes**

**Zucchini**

In order to be able to achieve a harvest on these warm weather vegetables before the cold weather and frost arrives, you should plant them as early in fall as you can (or late summer).

Temperatures are generally still very hot during this time, so you must take care to offer some protection from the sun during the hottest times of the day and until young, tender transplants become established.
